## Allegion to Present Comprehensive Security Solutions at Security Essen

Leading global security products and solutions provider, Allegion, will be presenting comprehensive security solutions at Security Essen show. Taking place in Essen, Germany, on  $27^{\text{th}}-30^{\text{th}}$  September, Allegion will introduce a complete range of solutions in two areas: connected digital solutions (Hall 11 – C12, Simons Voss), and security products and software for workforce productivity (Hall 3 – D30, Interflex).

Security Essen is the world's leading trade fair focused on security and fire prevention and is attended by security experts from more than 100 countries. Visitors to the Allegion stands will have the opportunity to talk directly to product specialists and have a first-hand look at some of the most innovative solutions and products offered by the company's family of leading brands.

Huge advances in technology in recent years, such as motorised electronic locking systems that can be opened from the outside without a key, are changing the way the industry and consumers think about door hardware. SimonsVoss will be presenting the digital SmartHandle 3062 with its DoorMonitoring function – and the universal control unit SmartRelay 3 3063 Advanced. Further highlights at the trade fair are the intelligent SME solution Mobile Key as an online variant and the very latest developments from the integrated access control product SmartIntego. Products such as the CISA eGO, a complete contactless lock for the hospitality industry and eFAST, an electronic panic exit device for educational buildings, are sure to be high interest products at the show.

Allegion's main product stand (Hall 11 - C12) will focus on the latest connected solutions available to private residences, schools, hospitals and hotels. On the stand, SimonsVoss, the leading digital locking systems brand, will be showcasing some of the industry's most innovative access control solutions, developed as solutions for a wide range of markets and user needs.

The company's 'Interflex' stand (Hall 3 – D30) is to showcase the full customisation solutions that are available from Allegion for a wide array of building types and uses. From initial development and production of hardware and software, through to sales, service and maintenance; customised access control and time management system packages are of increasing interest to companies across the world. As an example Interflex has developed an app that allows electronic access control even for a small number of people or individual departments. Already existing RFID credentials from Legic or Mifare can be used in conjunction with this app. Permissions can automatically be transferred to doors with electronic locking systems or employee credentials via NFC and an Android smartphone. With the combination of app and hardware, up to 25 doors and 250 users can be managed cost effectively, without the necessity of having to install a complex access control system.

Lucia Veiga Moretti, Allegion President for Europe, Middle East, India and Africa comments: "We are very excited about the opportunity that Security Essen gives us to meet our customers from across the globe. Our goal as a company is always to offer solutions that actively address safety and security challenges in an increasingly complex world. We are an innovative company that asks questions,

# listens to customers to anticipate their needs, then provides comprehensive and industry-leading security solutions, so we are delighted to be able showcase our most recent developments at this time."
