

You Are Here

(And so is everyone else)

As it continues to grow, the world's population is becoming rapidly urbanized. At the same time, we underutilize the space we have in our cities.

As we consider options to repurpose space, we must also reexamine access control technologies to help us make sure the right people are in the right place at the right time.

2015

50%

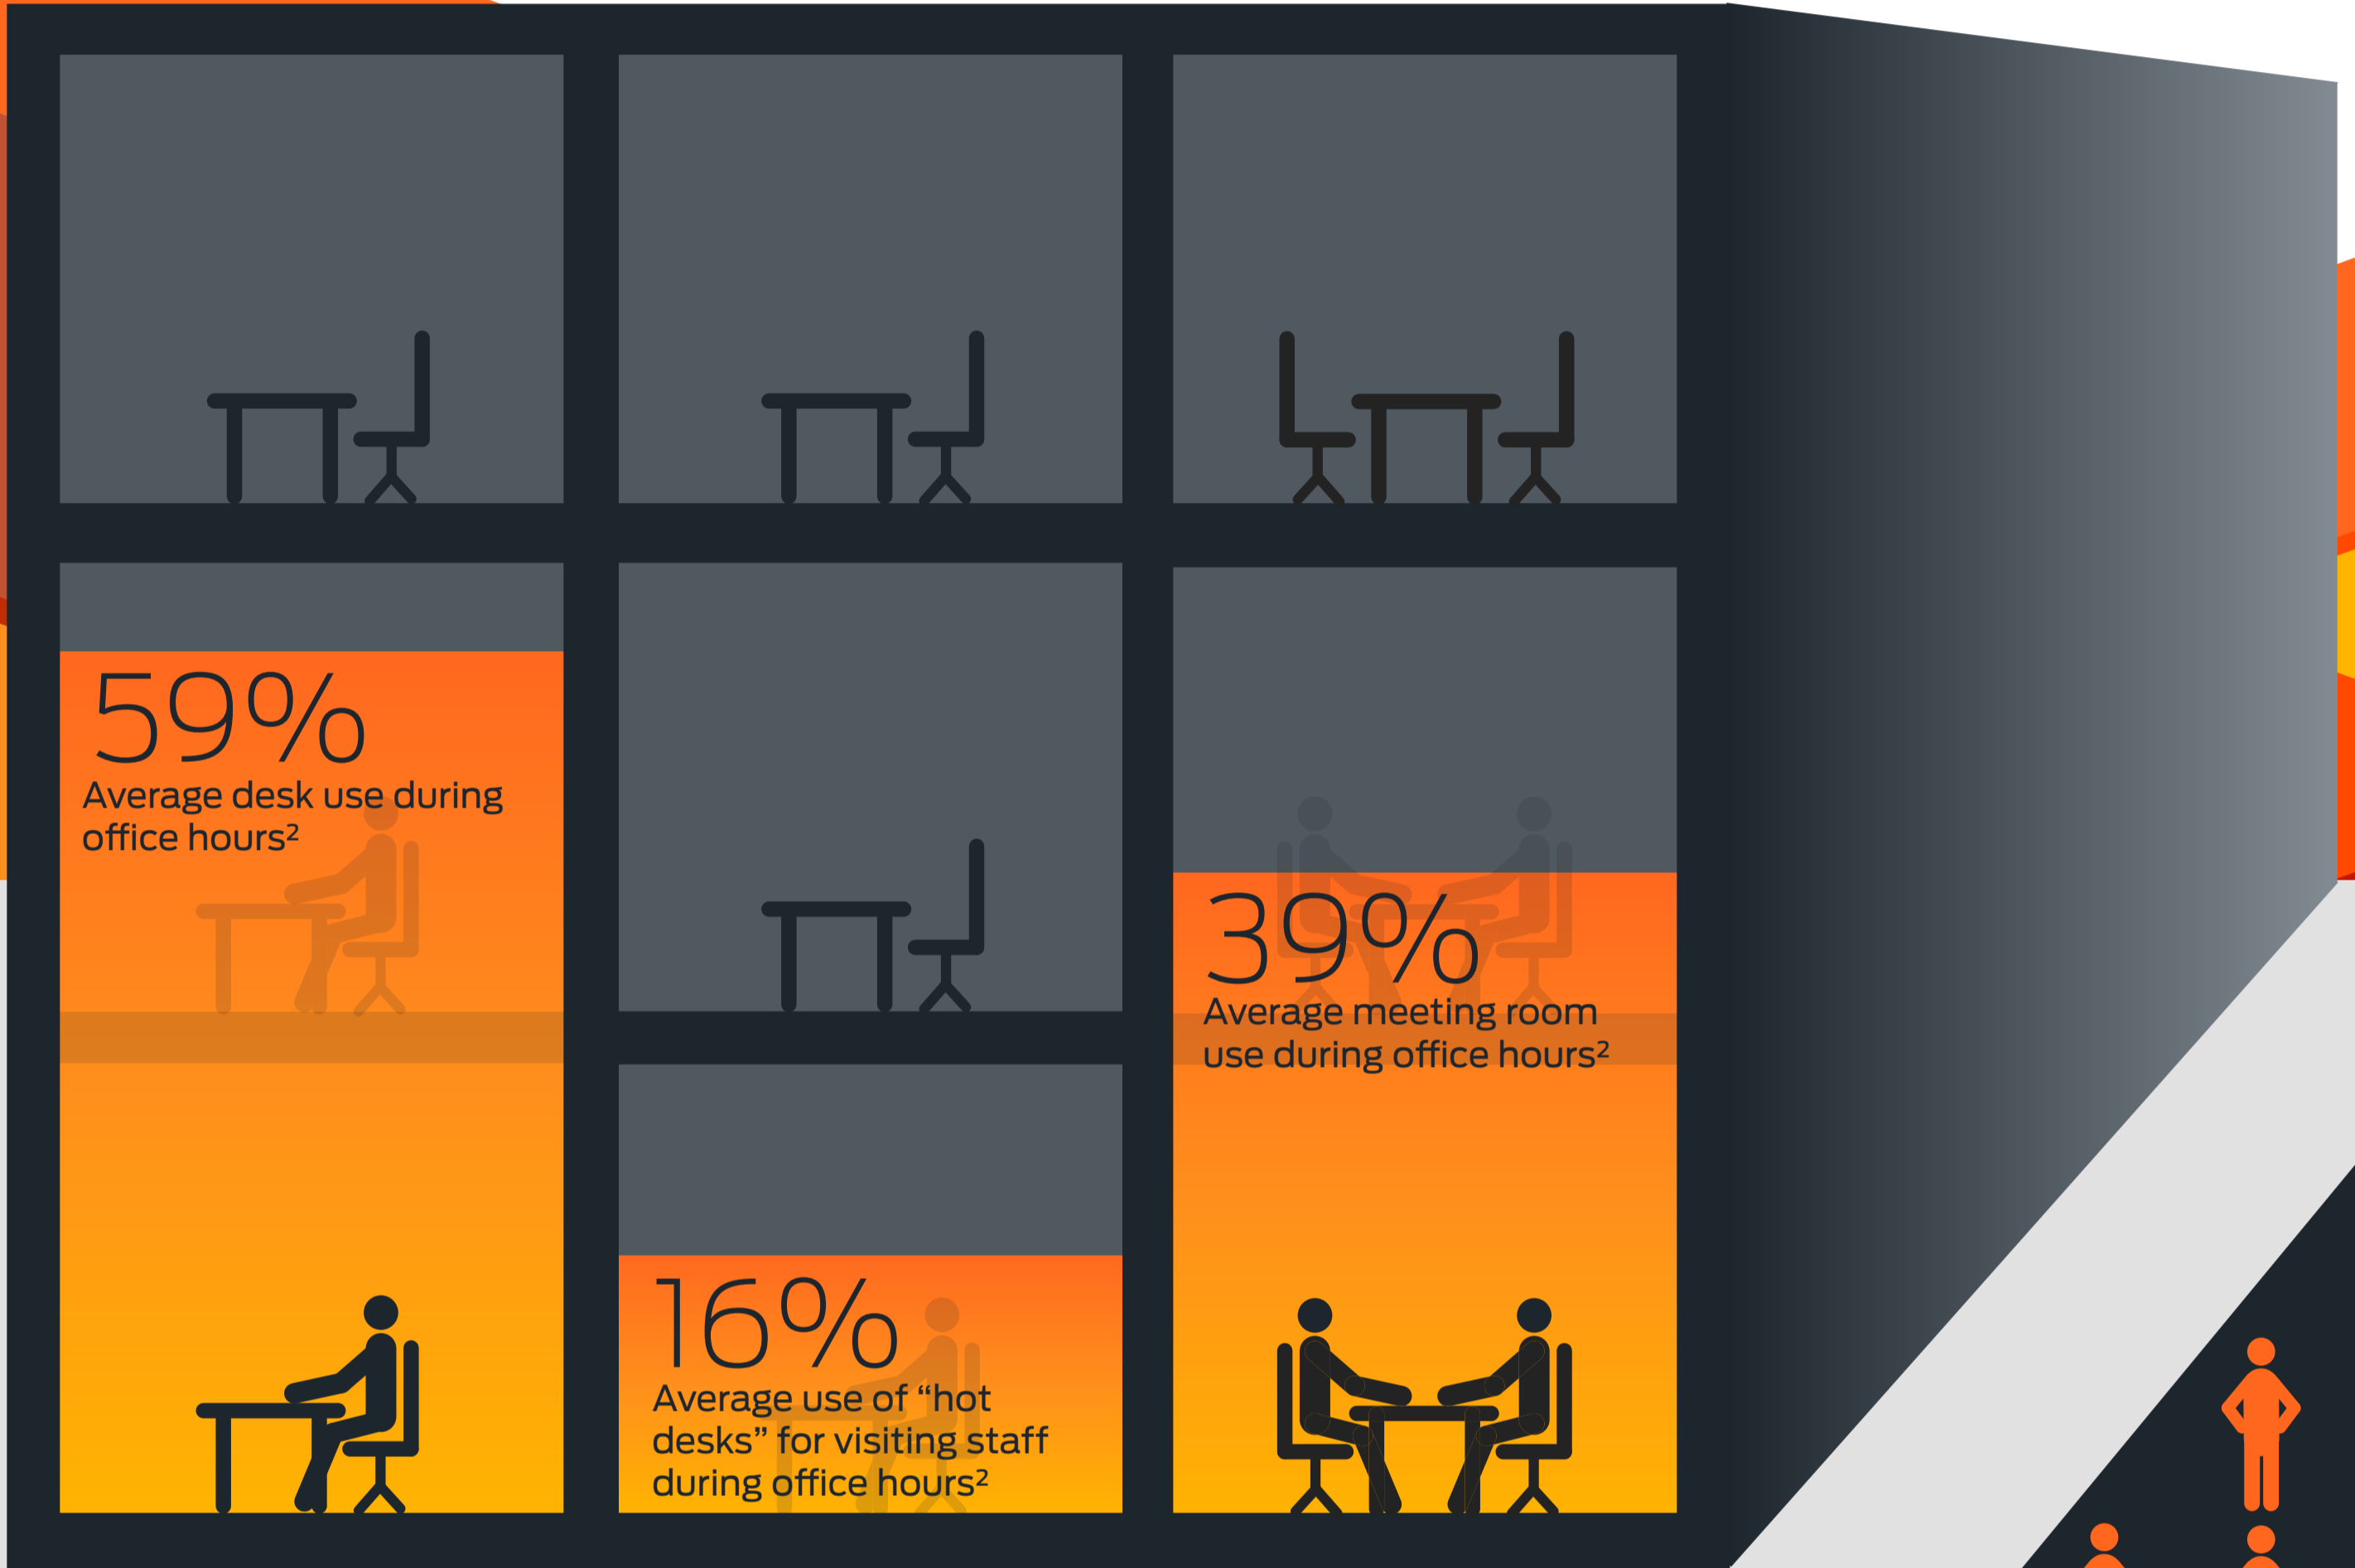

of world's population lives in cities

2050

67%

of world's population projected to live in cities¹

Wasting Space

Cities are becoming more crowded, but workplaces can still feel like a ghost town – and not just on Friday afternoons. As more workplaces offer flexible and remote work options, they can repurpose underutilized space to serve the demands of a growing urban population.

770,000

The number of empty office buildings the U.S. Government maintains

\$1.7B

Annual cost to maintain empty government office buildings³

Closing the Tailgate

As space is repurposed to serve more diverse needs, advances in sensors, access control, biometrics, AI and scheduling technologies can help businesses more effectively monitor and control their spaces, minimizing risks associated with practices like tailgating.

70% of enterprise security executives believe their businesses are currently vulnerable to a security breach due to tailgating.⁴

Tailgating: Employees holding secured doors open for other employees, unbadged visitors or third party workers.
